

Register of Recognised Laboratories for New Zealand

2017 Edition

Printed April 2017

The Register of Recognised Laboratories for New Zealand is printed annually by the Ministry of Health, as required by section 69ZY of the Health Act 1956.

The Act specifies that:

- (4) The Director-General must maintain a register of recognised laboratories.
- (5) The following particulars must be recorded in the register in respect of every recognised laboratory:
 - (a) the name and business details of the person or agency that operates the laboratory;
 - (b) the date of the laboratory's recognition;
 - (c) any conditions relating to the recognition of the laboratory;
 - (d) the test methods and determinands in respect of which the laboratory has—
 - (i) expertise; and
 - (ii) the appropriate testing equipment;
 - (e) any other particulars that may be required by or under this Part or regulations made under section 69ZZY.

Section 69ZZ of the Act specifies that any analytical testing of raw or drinking water required by the Act, or the drinking-water standards, is in most situations to be performed by such a recognised laboratory.

Laboratory evaluation and registration is currently actioned through International Accreditation New Zealand (IANZ).

The 2017 Register documents 49 laboratories and 875 laboratory tests, as at 3 April 2017.

Laboratories are listed alphabetically in the Register for the whole of New Zealand.

Interpreting a Register Entry

Laboratory Name

This 'heading' name is sometimes abbreviated, and may include the town or city if another branch is separately registered. Such adjustments ensure that the name used here is unique in the Register.

Laboratory Details: Formal laboratory name

Address

Town or City

Phone

Laboratory first recognised:

Date on which the first test was recognised for this laboratory.

xx tests for laboratory name

Specifies number of tests performed by the laboratory. These are then listed in the table.

Example table entries

Determinand	Method	Certifier	Recognised
Copper	Ind Coupled Plasma + Mass Spec	IANZ	30 Nov 11
E. coli	Colilert	IANZ	18 Aug 02
E. coli	Colilert Quanti-Tray	IANZ	18 Aug 02
Faecal Coliforms	Multiple Tube Fermentation	IANZ	11 Jun 16
Fluoride	Ion Chromatography	IANZ	11 Jun 00
Nitrate Nitrogen	Cadmium Reduction, Flow Inject	IANZ	14 Dec 03
pH	pH Meter	IANZ	21 Jan 17

Table entries explained:

Determinand: The chemical, micro-organism, or physical property of the water that is being measured.

Method: An abbreviated summary of the analytical method used to perform the test. If different acceptable methods are used by a laboratory to analyse for the determinand, each is listed as a separate row in the table.

In a few instances in this Register, two consecutive lines will appear identical. This is not an error but recognises that in the detailed method specification there are several sub-methods that have been separately recognised. Full details are available from the laboratory itself.

Certifier: The organisation certifying the laboratory for this test. Currently IANZ is the only certifier, offering a full accreditation of the laboratory (IANZ) or a certification specifically for drinking water laboratory recognition (IANZ Level 2).

Recognised: Date on which this test was first recognised for this laboratory.
