3 These organisms usually have inducible cephalosporinases. Stably-derepressed mutants that produce high levels of cephalosporinase frequently occur.

4 3.6% of *E. coli* from bacteraemia, 1.9% of urinary *E. coli*, and 15.4% of *Klebsiella* from bacteraemia were reported to be ESBL producers.

5 High-level resistance.

6 Includes methicillin-susceptible and methicillin-resistant isolates.

7 Cefotaxime/ceftriaxone resistance (MIC ≥4.0 mg/L, CLSI interpretive standard for non-meningitis infections).

8 Penicillin resistance (MIC ≥2.0 mg/L, CLSI interpretive standard for oral treatment of non-meningitis infections).
