1 Data supplied by Aotea Pathology; Canterbury Health Laboratories; Greymouth Hospital laboratory; Hawkes Bay Hospital laboratory; Healthlab Kew; Hutt Hospital laboratory; LabCare Pathology, New Plymouth; Laboratory Services, Rotorua; LabPlus; Labtests; Medlab Central; Medlab Wairarapa; Medlab, Whanganui; North Shore Hospital laboratory; Northland Pathology; Pathlab Bay of Plenty; Pathlab Waikato; Southern Community Laboratories, Canterbury, Dunedin and Hawkes Bay; Taranaki Medlab; Tlab, Gisborne; Waikato Hospital laboratory; Wellington Hospital laboratory; and Whangarei Hospital laboratory.

2 Data presented only if available for ≥ 100 isolates.

3 These organisms usually have inducible cephalosporinases. Stably-derepressed mutants that produce high levels of cephalosporinase frequently occur.

4 5.2% of *E. coli* from bacteraemia, 3.0% of urinary *E. coli*, and 16.8% of *Klebsiella* from bacteraemia were reported to be ESBL producers.

5 Data presented for *M. morganii* and *P. mirabilis* is for meropenem.

6 High-level resistance.

7 Includes methicillin-susceptible and methicillin-resistant isolates.

8 Cefotaxime/ceftriaxone resistance (MIC ≥ 4.0 mg/L, CLSI interpretive standard for non-meningitis infections).

9 Penicillin resistance (MIC ≥ 2.0 mg/L, CLSI interpretive standard for oral treatment of non-meningitis infections).
